

# What did you like about today's session?

Good

Good explanations of content

i didnt understand what half the tasks were asking me to do

Felt like actual coding. Was progressive. Some questions are worded weirdly but apart from that it was very instructive.

solid, dense, fun, painful, life changing

bit wobbly with it all but thats expected

10/10, would code again

it was lovely had a great time

Quite a lot of interesting information learned today but the pace was quite fast. Nevertheless, it is understandable.

# What did you like about today's session?

sitting for 3 hours straight is hard, more activities that force you to work in a group/partner

mind boggling

it was great! thank you

wihii

Some tasks seem way too convoluted to even understand what the intention of the question is

Session would be easier to follow if examples gone through were the one's on our Jupyter page

The wording on this question made absolutely no sense: "If 'low' and 'high' are both non-negative integers, how long is the list values[low:high]?"

it was hard to start the tasks without knowing how to do them

quite fast but ok

# What did you like about today's session?

explain the task more

learning step by step, clear information. but the task explaining is hurry, hard to catch on
